UXstorm™

Specific PDF Forms?
## Tired of Manual Processes?
Do You Need Help?

It doesn't matter what industry or what department you are in. There are always forms that must be filled in to get permission, work done, something ordered, something billed... On top of this mountain of forms lay many processes, approvals, revisions...

ServiceNow® is an awesome platform for automation of these items, except the creation of PDF forms.

With UXstorm's PDF Application, that problem's solved!

Imagine a new hire experience. In this simple example, many different forms are required. Some are in ServiceNow® already. Still, organizations require 'proof' or 'requests' via paper forms.

UXstorm PDF enables the creation of PDFs using preexisting PDFs as templates. This is not a simple "generate a PDF" from a ServiceNow® form. UXstorm PDF takes the **exact** form required and populates it with information already collected in your automated process.

• Create a new Form in the Application with the required PDF
• On any field, map your gathered data by:
  • Simple field to field mapping
  • Conditional Mapping
  • Complex Logic Mapping using JavaScript
• Voilà! Now the PDF is produced automatically or on demand!

IT
• Purchase Requests
• Invoices
• Items Received
• Transfer Requests

HR
• Offer Letters
• Non-Disclosure
• Special Documents
• Agreements

Facilities
• Transportation Request
• Location Setup
• Phone Extension

Government
• OPM-71
• I-9
• W-4
